<b>Goals</b>	Happy us and happy customer; learning new things; well working software that fulfills all requirements
	We want to create a space where everyone can learn from each other and where we benefit from our different strengths
<b>Meeting norms</b>	Show up max 10 min late with reason, communicate beforehand if there's a bigger delay. let others know in advance if you miss a meeting
<b>Working norms</b>	Try to write clean code, be considerate about commits when pairing, everyone should agree before releasing
	If someone struggles with a task we support each other and give contribution to the person who helped
<b>Coordination norms</b>	Let others know upfront if encountering any problems, need help, can't attend a meeting via whatsapp group; read emails and messages
<b>Communication norms</b>	Camera on, let people finish their sentences, write stand up emails regularly, communicate problems openly, be nice :)
<b>Consideration norms</b>	Camera can be off if the bandwidth is bad on teams, less tasks for people if they have an exam etc
	We volunteer for common jobs
<b>Cont. improvement norms</b>	We jointly review the happiness index in every team meeting
<b>Rewards</b>	Applause
<b>Sanctions</b>	Sad smileys on zoom :(

Product Vision	Project Mission
<p>The firmware scraper makes it possible for those who are interested in gathering firmware data to always have the most recent information. Our automated solution offers the access to firmware’s meta data from numerous vendors with a single click and without the need for spending further human resources.</p>	<p>The mission of this project is to create a software for downloading firmware from different vendors and storing their meta data in MySQL database. The main functionality will be scheduled searching for firmware, checking for presence in the data base, downloading the updated ones and storing the meta data in the data base. Overall, ensuring that the information in the data base is up to date and readily available for further analysis.</p>

<b>3</b>	<b>Reasearch Firmwares</b>	Download Firmware					
			Download Firmware - Zyxel	3		3	
			Download Firmware - AVM	3		3	
			Download Firmware - Schneider	3		3	
			Download Firmware - Synology	3		3	
			Download Firmware - Asus	3		3	
<b>4</b>	<b>Project Structure</b>	Schema and core structure					
			Create schema for SQL DB	5		5	
			Create MySQL Database	2		2	
			Create core structure	5		3	
			Scheduler	3		3	
			Saving Meta data to mySQL	3		3	
<b>5</b>	<b>First vendor modules</b>	Integrate vendor specific modules					
			Schneider scraping module integration with core	3		3	
			Refinement of AVM vendor module	3		3	
			Logger - concept	2		3	

Sprint	Theme	Goal	Feature Name	Est. Size	Est. Remaining	Real Size	Real Remaining
6	Database refinement	Modifying database and vendor modules integration					
			Mapping the downloaded vendor meta data to the mySQL schema	2		2	
			Template vendor modules structure	2		2	
			Scrape AVM upload date	3		3	
			AVM scraping module integration with core	1		1	

#	Feature Definition of Done	Sprint Release Definition of Done	Project Release Definition of Done
	All the acceptance criteria have been met	At least 1 fully implemented feature	The chosen features are fully implemented in the code
	The code has been merged with the main one	There are no major bugs	The features are running without crashing
	The documentation and Bill of Materials have been updated	Successful vendor module test	Feature test coverage >= 50%
	The code is complete and uploaded in GitHub		User documentation is available
	Functionality has been reviewed		Developer documentation is available
	The tests to ensure the feature is working have been created		Installation script is available

Sprint	Theme	Goal	Feature Name	Est. Size	Est. Remaining	Real Size	Real Remaining
